Datasheet V2.4

AND Phone

Observer

AND Phone is a scaleable software framework to realize and integrate advanced services for CallManager environments. Using a flexible and modular approach, AND Phone offers cost-effective and fast adoption of new services which can be integrated into new and existing environments.

„ANDPhone Observer“ extents the capabilities of the IPT environment with surveillance functions and allows to deliver images from IP cameras directly to the IP telephone.

Combining multiple images on one display gives a comprehensive overview of available cameras. By using the touch screen functionality of the telephone you can easily switch to a detailed view of a specific camera.

The observer can be combined with a door opener service to realize access control functionality completely on the phone. Especially for office applications it helps to realize a fast and efficient workflow.

The administration of the „AND Phone Observer“ module is done on the web based front-end of the „AND Phone“ server, like all other modules of the AND Phone platform.

Web based administration

Benefits

- Optimized workflow for secretary applications
- Fast overview of multiple cameras
- Simple camera selection by touch screen
- Door opener integration
- Surveillance services integrated into IP Telephony

Phone Functions

- Displaying camera images
- Split-screen display of up to 4 images on one screen
- Touch screen to select camera
- Automatic image push for specific calls

Administrator Functions

- Centralized management
- Create, edit and delete cameras
- Access restrictions for cameras
- Integration of door opener

System Requirements

- CallManager 4.0 or higher
- Windows 2000 Server or Appliance
- Internet Explorer / Netscape / Opera

Supported IP Telephones

- Cisco IP Phone 7970
- Cisco IP Communicator
